

Digital Media Gateway™ HD News Connect

Integrate the Digital Media Gateway into ENPS

Pathfire's Digital Media Gateway™ (DMG) HD News Connect adds unprecedented access and control of your Pathfire-delivered news content and metadata by integrating DMG functionality into your AP ENPS newsroom computer system (NCS).

Empower newsroom desktops

HD News Connect is more than just another ActiveX plug-in. ENPS searches yield relevant news content available on the Pathfire Server. You can view low-resolution browse clips within ENPS and drag and drop the included script information directly into news scripts. Users can focus on a single interface, resulting in increased productivity.

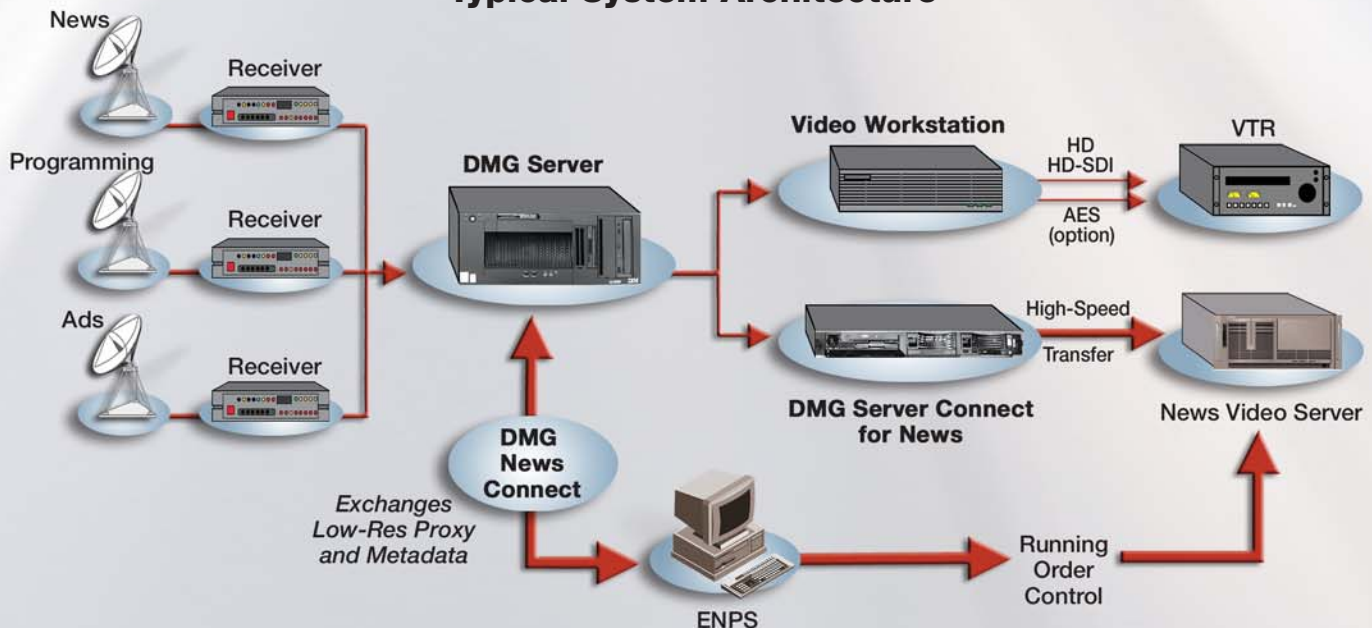

Fully automated process

As news stories are delivered to your DMG Server, the content is automatically added to ENPS. As items are deleted from the DMG Server, the objects are automatically removed from the newsroom computer system.

No additional hardware required

HD News Connect is a software service installed on the DMG Server in your facility. Once enabled, a network connection between your newsroom computer system and the DMG Server is all you need to begin realizing the many workflow benefits.

Typical System Architecture

DMG HD News Connect integrates with the DMG HD Server and ENPS.

Integrated solutions

HD News Connect is a companion software module to DMG HD Server Connect for News, another of Pathfire's Connect modules which transfers Pathfire delivered content as files. The file transfer process eliminates the need to load tapes or route and record video.

Pathfire customer support

Pathfire provides its industry-leading 24 x 7 x 365 telephone, e-mail and Web support to each Pathfire customer. Pathfire's Network Operations Center uses the most advanced remote monitoring tools available. We use these tools to ensure the Pathfire system in your facility is fully operational, and your content is available at all times.

Benefits to newsroom workflow

- Move content and metadata automatically and accurately
- Preview video from within your newsroom computer system
- Reduce errors and add efficiencies
- Merged search from within ENPS quickly locates the perfect video for the story
- Work within a single application
- Drag and drop scripts to rundowns/lineups

Industry standards

- Integrates with the most popular newsroom computer systems
- ActiveX components
- MOS 2.8 (Profiles 0 and 1)
